DETAILED ACTION

Information Disclosure Statement

1. The references listed in the information disclosure statements submitted on 7/31/06 has been considered by the examiner (see attached PTO-1449).

Drawings

2. Figure 9 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having

ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims **1, 10** are rejected under 35 U.S.C. 103(a) as being unpatentable by Oh (US 6,400,932).

Regarding claims **1, 10**, Oh discloses a receiver comprising:

a filter that sends out an output signal having a symbol at an arbitrary time interval (see Figs. 1-2 regarding output Vo and Vob and col. 2, line 40-48) ; and

an intermittent operation part that controls the filter intermittently at the time interval, according to the output signal supplied from the filter (see Figs. 1-2 and col. 4, line 55 – col. 5, line 20 and col. 6, lines 15-24).

Here, although Oh is silent with symbols for the signal, it is noted that when incorporating the filter in Oh to an OFDM receiver, the output signal of the filter in Oh would obviously comprise symbols with arbitrary time intervals in the similar way as disclosed by Nakao (see Figs. 2-6 and [0056, 0057] regarding symbols and guard time intervals). By doing so, it is clear that the intermittent operation part that controls the filter in Oh would occur intermittently at time intervals in the similar way for intermittently controlling the gain of the AGC amplifier as disclosed by Nakao (see [0068]). Also note that the AGC circuit 16 is also a variable-gain type digital filter (see Nakao, [0045]) and would read on a filter with the broadest reasonable interpretation.

Therefore, the claimed limitations are made obvious by Oh and Nakao.

Allowable Subject Matter

5. Claims 8-9 are allowed.
6. Claims 2-7,11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

See the attached PTO-892.
